Subject: Cas-68716 Cannot access TEST company CRM:02660503

Hello Rick,

I was able to find this about the error you are getting:

<http://www.syvantis.com/technical-blog/lists/posts/post.aspx?ID=39>

The selected company is not configured as a company of the current Microsoft Dynamics GP system database. You must resolve the database configuration to log in to the company".

If you are receiving this message it could be a possible issue with test company ID reference in the dynamics table: SY00100. The company ID's in this table need to match what is in the SY01500 table.

You will need to check the SY00100 table of the restored company database and verify that the COMPANYID and DBNAME columns are correct. Check the DBNAME column to ensure they are accurate as well as the COMPANYID (it should match the COMPANYID in the SY01500 table of the system database.)

To view the data from these tables, use the following SQL queries:

- Select * from <System Database>..SY01500
- Select * from <Company Database>..SY00100
- Where <System Database> = DYNAMICS or whatever you set as the system database during installation and <Company Database> is the database name for the company causing the error.

Let me know how you get along with this.

Thanks,

Justin Bradley
